

LASEMD SKIN RESURFACING PRE-TREATMENT

- Avoid direct sun exposure for one week prior to treatment.
- Do not apply self tanners or spray tans for two weeks prior to treatment.
- Avoid retinols or tretinoins for one week prior to treatment.
- If you have a history of fever blisters, please notify us. To prevent a flare-up, your provider may issue a prescription for prophylactic antiviral therapy to begin two days prior to treatment.
- Please notify your provider if you have had any cosmetic tattooing on or near the treatment area.
- Photosensitizing medications (medications that make you sun sensitive), including Doxycycline, Ciprofloxacin, Levofloxacin, and Tetracycline, should be discontinued three days prior to treatment.
- Pregnancy and nursing are contraindications for treatment.
- Current skin cancer or other other types of cancer or premalignant moles are a contraindication for treatment.
