

LASEMD SKIN RESURFACING PRE-TREATMENT

- Avoid direct sun exposure for one week prior to treatment.
- Do not apply self-tanners or spray tans for 2 weeks prior to treatment.
- Avoid retinols or tretinoins for 1 week prior to treatment.
- If you have a history of fever blisters, please notify us. We may choose to write you a prescription for prophylactic antiviral therapy to start 2 days prior to the treatment to prevent a flare-up.
- Please notify the provider if you have had any cosmetic tattooing on or near the area to be treated.
- Photosensitizing medications (medications that make you sun sensitive), including doxycycline, ciprofloxacin, levofloxacin, and tetracycline, should be discontinued three days prior to treatment.
- Pregnancy and nursing are contraindicated for treatment.
- Current skin cancer or other conditions of any other type of cancer or premalignant moles are a contraindication for treatment.
